

Extended Finite State Models of Language

PROCEEDINGS OF THE ECAI'96 WORKSHOP

ANDRÁS KORNAI

Editor

EVA EJERHED
FREDERICK JELINEK
LAURI KARTTUNEN
ANDRÁS KORNAI

Program Committee

CONTENTS

Eberhard Bertsch and Mark-Jan Nederhof: An innovative finite-state concept for recognition and parsing of context-free languages	1
Jean-Pierre Chanod and Pasi Tapanainen: A non-deterministic tokeniser for finite-state parsing	10
Erzsébet Csuhaj-Varjú: COLONIES: a multi-agent approach to language generation	12
Eva Ejerhed: Finite state segmentation of discourse into clauses	19
Gregory Grefenstette: Light parsing as finite-state filtering	20
Frederick Jelinek: Language modeling for speech recognition	26
Aravind Joshi: A parser from antiquity: An early application of finite state transducers to natural language parsing	33
Lauri Karttunen: Regular expressions for finite-state syntactic description	35
András Kornai: Vectorized finite state automata	36
Kimmo Koskenniemi: Finite-state morphology and information retrieval	42
Mehryar Mohri, Fernando Pereira and Michael Riley: Weighted automata in text and speech processing	46
Richard Ohrle: Finite-state methods, binding, and anaphora	51
Emmanuel Roche: Finite-state transducers: parsing free and frozen sentences	52
Catherine Rood: Efficient finite-state approximation of context free grammars	58
Anne Schiller: Multilingual finite-state noun phrase extraction	65
Wojciech Skut: Finite automata for processing word order	70
Richard Sproat: Multilingual text analysis for text-to-speech synthesis	75
B. Srinivas: Explanation-based learning and finite state transducers: Applications to parsing lexicalized tree adjoining grammars	82
Masakazu Tateno, Hiroshi Masuichi and Hiroshi Umemoto: The Japanese lexical transducer based on stem-suffix style forms	88
J.M. Vilar, E. Vidal and J.C. Amengual: Learning extended finite state models for language translation	92
Bruce Watson: Implementing and using finite automata toolkits	97
